

EXTEND THE MAC EXPERIENCE

Turn Thin Clients, PCs and Mobile Devices into a Mac

DYNAMIC SYSTEMS INC.®

Your Data Is Our Business

FEEING TRAPPED? Are you financially committed to an existing infrastructure that doesn't support the Macintosh® OS X environment? Expand your boundaries and free your users from current computing constraints. Dynamic Systems delivers the Macintosh experience via OS X servers to diverse hardware and software platforms and mobile devices.

Easily Deploy the Mac Platform. There has never been a real Terminal Server option for the Mac OS X platform—until now. With Mac Connect Terminal Server, you finally have the option to deploy the Mac platform in a variety of computing environments.

By using graphically-enhanced terminal emulation, Dynamic Systems engineers will help you deploy Mac Connect Terminal Servers and Software, which cost-effectively make it possible for diverse workstations and multiple devices to function as thin clients of a Mac OS X server running many Mac OS X-based programs.

As users of Mac Connect Terminal Server share the resources of a common server, it's easy to install, configure and maintain all of your programs. Administrators can centrally administer user environments and provide support by shadowing user sessions.

How It Works. Aqua Connect Terminal Server makes it possible to deploy most Mac OS X applications across networks quickly and at a lower cost. Diverse workstations and RFB-enabled mobile devices function as thin clients, negating the need for numerous OS X application software installations. The Mac Connect Solution supports Microsoft® RDP, VNC and X11 protocols.

KEY BENEFITS

Access the Mac OS X Platform, Concurrently and from Diverse Hardware

Quickly Deploy Mac Applications

Lower Costs

Reduce Software Installations

Streamline IT Maintenance

Increase Productivity

Centralize IT Resources

EXTEND THE MAC EXPERIENCE

WHY DYNAMIC SYSTEMS?

Dynamic Systems provides technology solutions that make data management simple. We work closely with our clients to understand current challenges, long-term goals and budget requirements – then combine best-in-class hardware, software and support to streamline maintenance and optimize performance.

Since 1991, Dynamic Systems has built a solid reputation as the IT experts of choice with a relentless focus on customer satisfaction and strong understanding of our clients' core requirements. Our cleared resources, financing options and contract vehicles make it very easy to work with us, particularly for our government and education customers. As a small, minority-owned business with enterprise-class resources, partnerships and state-of-the-art facilities, we provide the IT consulting, product advice and training you need to succeed.

GET STARTED TODAY

Let the experts at Dynamic Systems deliver the Mac OS X experience to an array of hardware, software and mobile devices with the Mac Connect Solution.

Call us at 310 337 4400 to learn more about how the Mac Connect Solution can help you cut costs, centralize IT resources and easily deploy Mac applications.

Reduce IT Overhead. The Mac Connect Solution delivers the Macintosh OS X experience to diverse hardware and software platforms and mobile devices. Users can log into the OS X server as if they were connected to the server's console, work with a full-featured OS X desktop and run OS X-based applications. All user sessions are fully isolated from one another. And since all configuration files and applications are stored and maintained on one central OS X server, the Mac Connect Terminal Server significantly reduces IT overhead in the following areas:

- Desktop Support
- Maintenance
- Upgrades
- Licensing Costs
- Networking Costs
- Energy Costs and Consumption

Primary Features. The Mac Connect Solution offers the following primary features:

- Support for existing Mac OS X 64-bit computers with Intel® architecture.
- Remote administration of terminal services and user accounts enabled via graphical user interface.
- Compatible with most RFB-enabled mobile devices as implemented by Virtual Network Computing (VNC).
- Compatible with several X11 thin clients and most RDP thin clients.
- Support for numerous simultaneous sessions per server.
- Storage and maintenance of configuration files and apps on one central OS X server.
- Compatible with Apple® Workgroup Manager.
